

WELCOME

TO INFORMATION TECHNOLOGY DEPARTMENT WORKSHOP

Mandate

The NRU Information and Technology (IT) department will be mandated to oversee technology-related tasks and responsibilities. The department is divided into multiple specialized subdivisions.

Generally, the IT department consist of the main areas of work including the organization's technological systems, maintenance of its digital and technological infrastructure and ensuring that all systems function together effectively. The department will also deal with the NRU's hardware and software needs, which are often used by many employees outside of the IT department.

The Functions and Responsibilities of the NRU IT department

The NRU IT department functions and responsibilities can be broken down into distinct categories. One of the main categories is administration; these departments typically provide IT

administration support to the broader organization and their own departments. This involves the maintenance and repair of the NRU technological systems, advising on new solutions and helping NRU to install and utilize new equipment. The common duties of IT administrators include but not limited to maintaining the organization's computer and digital infrastructure, managing data storage needs, assessing potential threats to the organization's digital infrastructure, ensuring the organization's compliance with quality standards, training employees in the use of new and existing systems, assisting with and resolving software and hardware issues and installing regular software updates.

Providing Technical Support

The technical support staff aid other departments of the organization who need access to the organization's systems. This can involve helping to troubleshoot problems and resolving other issues regarding both software and hardware. A lot of their work relates to repairing existing systems, although their roles extend further than this. For instance, they are often a valuable source of information regarding the use and applications of paperless systems for the organization.

Communications

Many organizations rely on digital methods of communication. This can be for overcoming long distances, reducing logistical problems or to contact staff members who are working remotely. This communication can be both internal and external. Meetings and interviews need to be arranged between the HoDs, Managers and Staff members using digital and technological platforms. Certain members of the IT department typically handle all the arrangements necessary to make this type of communication possible.

STRATEGIC GOALS

- Establish comprehensive IT policies, procedures and processes, supported by a robust automated information
- To ensure NRU offices have the required equipment to function effectively
- Enhance collaboration across the NRU departments, through digital solutions. Also for department to have easy data flow within departments and across
- Ensure that IT department is well trained to function according to NRU parameters
- Establishing and implementing digital data protection strategies, enforced by a policy that will be made available
- Establish and employ streamlined policy and governance processes that align IT solutions with NRU objective
- Improve end-to-end transparency and accountability across departments
- To constantly assess systems used in NRU and analyze how they can be further improved for efficiency within the organization.
- Ensure all equipment is functioning well, recommend equipment to be purchased, maintain equipment and manage all systems.
- Integrate NRU into a paperless organization, also ensuring NRU partners are properly aligned to this goal.
- Constantly improve data security within the organization.

HR - DEPARTMENT

Introduction..

A human resources (HR) management system is a comprehensive software solution designed to streamline and automate various HR processes within an organization. Its goal is to improve efficiency, accuracy, and effectiveness in managing employee-related task and data.

We are proposing to provide the HR department with this essential service to bring in peace of mind in the organization and better yet improve record keeping and human resources related issues

Features of the HR information system

The HRIS offers a centralized database, automated processes, reporting capabilities, and data security. It streamlines HR operations and improves employee experience.

Benefits of an HR information system

Streamlines HR processes and reduces manual workload.

Improves data accuracy and reduces errors.

Enhances employee self-service and engagement.

Conversion of data to automated analysis and graphic-based outputs for easy data interpretation

Applicant Tracking
System (ATS)

PERFORMANCE DASHBOARD

Part-Time vs. Full-Time Employees

Female To Male Ratio

Internal Mobility 2017

47%

of all Director and Managing Director roles were filled internally.

21 positions

of 51 open positions were filled through our internal recruiting initiatives.

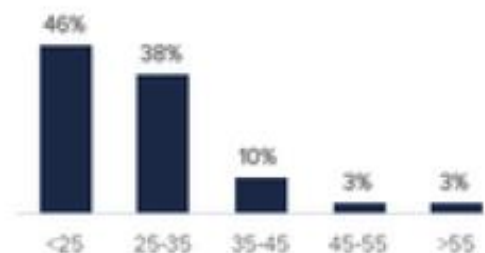

Time To Quit The Job

(Employees are most likely to leave their job around their one year anniversary)

Notices During First Year By Age Group

(Employees under the age of 25 most likely quit their job during their first year of employment.)

41%

of all vacancies were filled internally.

PERFORMANCE MANAGEMENT

- Performance management is a key part of managing people. Performance ratings are generated once or multiple times a year by the direct manager or peers of the employee.

REPORT AND ANALYTICS

- A much rarer module in HRIS systems is reporting and analytics. Modern systems enable the creation of automated HR reports on various topics like employee turnover, absence, performance, and more. Analytics involves the analysis of these insights for better-informed decision making. We'll explain more about this in the section below.

ACCOUNTING MANAGEMENT SYSTEM

Account department will use a customised software system that will link with certain number of departments including procurement and fleet management

The screenshot displays the Accounting Management System interface. On the left is a blue sidebar menu with the following items: Owner, Dashboard, Clients, Estimates, Invoices, Payments, Expenses, Projects, Time Tracking, Accounting, Reports (highlighted), Apps, and Team Members. The main content area is titled "Reports" and is divided into two sections: "Invoice and Expense Reports" and "Payments Reports". Each section contains four report cards, each with an icon, a title, a description, and a star icon for favoriting. A blue arrow points from the text "Star your favorite Reports" to the star icon on the "Invoice Details" report card.

- Team Members

Reports

Invoice and Expense Reports

Star your favorite Reports

- Invoice Details**
A detailed summary of all invoices you've sent over a period of time
- Expense Report**
See how much money you're spending, and where you're spending it
- Item Sales**
See how much money you're making from each item you sell
- Revenue by Client**
A breakdown of how much revenue each of your clients is bringing in.

Payments Reports

- Accounts Aging**
Find out which clients are taking a long time to pay
- Payments Collected**
A summary of all the payments you have collected over a period of time
- Accounts Payable Aging**
Find out how much each vendor needs to be paid
- Credit Balance**
Summary of all your credit balance for your clients over a period of time

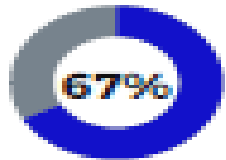

Security Hub System

To give the best security experience and avoid distorted security components we have come up with a security hub that will create a security in a box experience for our security officers . Helping them to find security alarms in real time and exhaust security options faster . This security hub will consist of all the security systems in our hub (software)

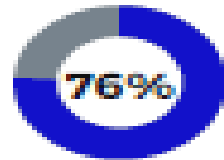

Wireless Printing Network System

All devices under the organisation will have wireless printing options and remote printing is also available for off-work or field printing

Devices

Tablets, phones, computers will be automatically connected to the printers and scanners

Cloud and email based printing

Cloud-based connections allow remote scanning and printing for registered devices

Digital Information Media System Hub

Our IT department will also facilitate the digital media system and put it in one hub for tracking and in-house control .All social media platforms, videos ,websites in one controlled box

CONTROLLED BOX

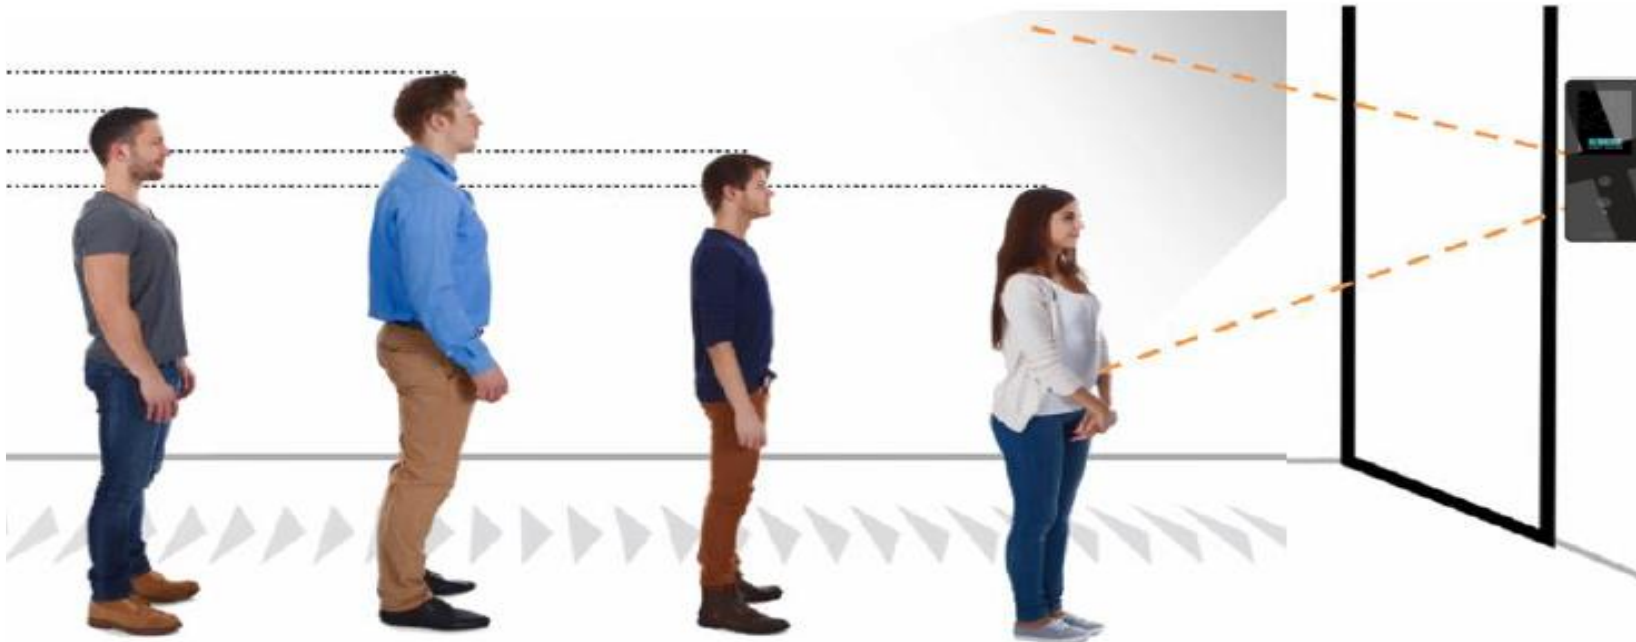

ACCESS CONTROL

Face Recognition Time and Attendance System

Genuine Outdoor Fitness

Superb ability for changing illumination, multiple recognition robust against race, complexion, gender, facial expression, beard and hairstyle difference. Good performance regardless of day or night environment, 24/7hrs continuous working.

Stable Performance – Low Energy Consumption, environment-friendly.

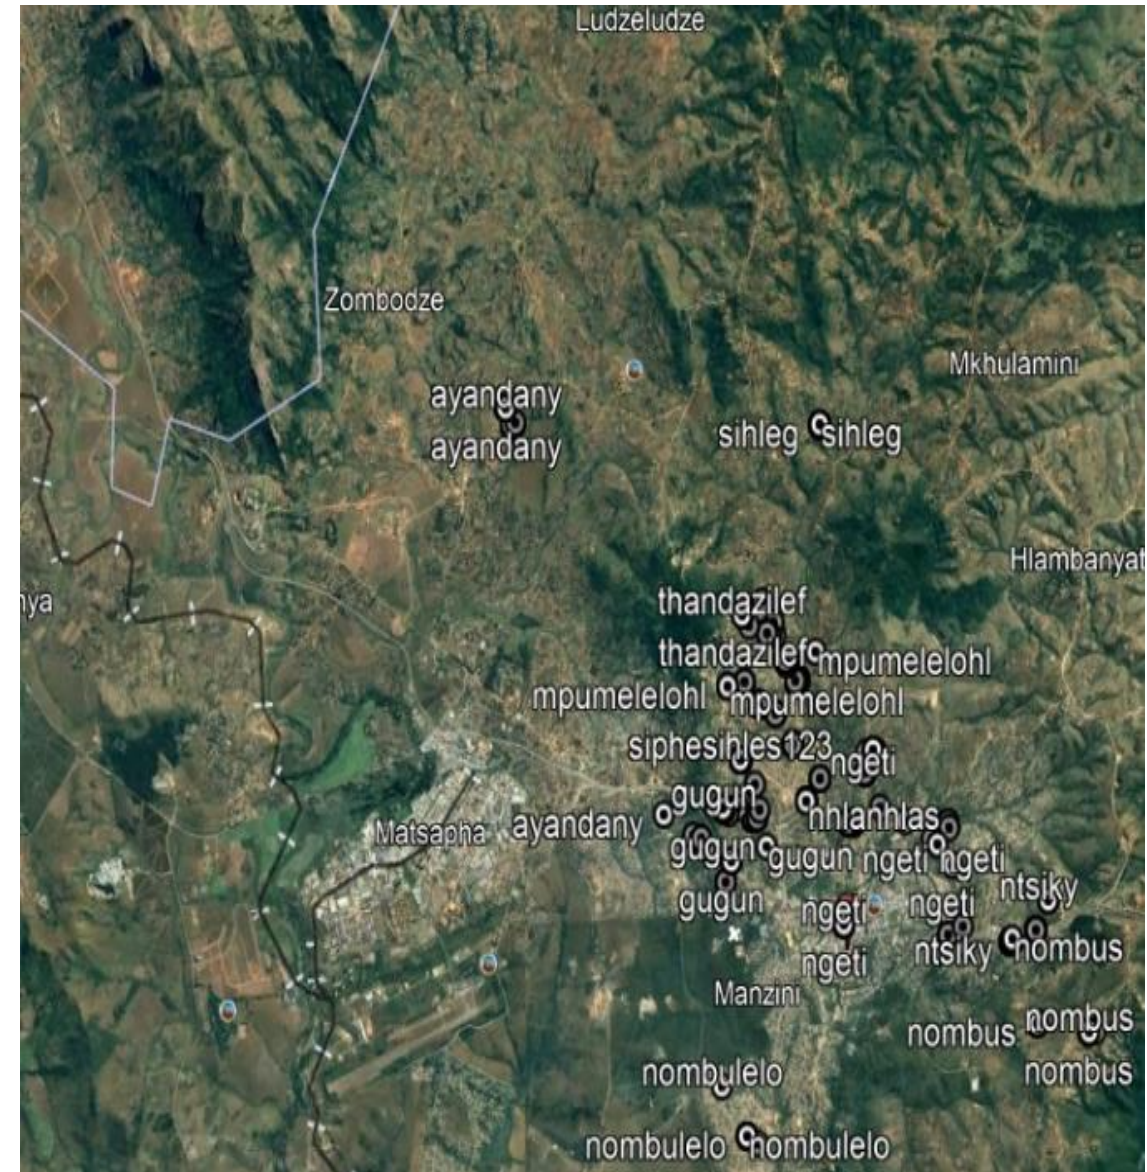

Main Features

- Latest Face Recognition
- Exclusive Image
- Excellent Accuracy
- Fast Analysis Speed

UNITED NATIONS^{AND} RELIGIONS

WORLD ORGANIZATION

An aerial photograph of a densely populated informal settlement in Johannesburg, South Africa. The image shows a vast area of closely packed, small, rectangular dwellings, many with corrugated metal roofs. The settlement is situated on a hillside, with a steep, forested slope visible on the right. A major road, likely the N1, runs vertically through the center of the image. Several smaller roads and paths crisscross the area. In the top left, a large, open area with some industrial or commercial buildings is visible. The overall scene depicts a high-density, low-income urban environment.
